

Information Technology Solutions

from Jigits

Jigits' professionals have experience with, and are trained in, the most advanced solutions to date. This includes solutions in Advanced Infrastructure Solutions (including Server Consolidations and Deployment/Migration Strategies), Business Intelligence, E-Commerce Integration, Project Management, Software Solutions, and Security Solutions.

Advanced Infrastructure Solutions

Knowledge and experience in crafting high-availability infrastructure solutions that include:

- Server Consolidations of UNIX, Linux, Windows, Novell, and other network operating systems
- Design and deployment solutions ranging from Active Directory® directory service to Windows/UNIX/Linux desktop and server deployments
- Data management migration and server consolidation
- Storage solutions design and deployment
- Disaster Recovery and Business Continuity
- Migrations of all types of systems ranging from applications, database, hardware & software migrations.

Business Intelligence

Knowledge and experience in implementing solutions that feature:

- Business intelligence
- Decision support systems
- Data warehousing & Data mining
- Online analytical processing (OLAP) & Online Transaction processing (OLTP)
- Relational Database Management Solutions using SQL Server, Oracle, and other popular RDBMS.

E-Commerce Integration

Knowledge and experience in the deployment of Internet-based business solutions and infrastructure including:

- Extranets and Web hosting
- Web application and portal development (including Office & Sharepoint Portal technologies)
- Web-based workflow and orchestration solutions.

Project Management

Extensive knowledge and experience delivering project management best practices methodologies and information technology service management (ITSM) frameworks. This includes information technology infrastructure library (ITIL) standards such as Microsoft Solution Frameworks (MSF), Microsoft Operations Framework (MOF), Rational Unified Process (RUP), Change Management Modules (CMM-SEI), International Organization for Standardization (ISO), Hewlett Packard ITIL, Project Management Institute (PMI), and several other frameworks and IT guidance.

Software Solutions

Knowledge and experience in developing and marketing packaged software solutions based on Microsoft and Open-Source technologies including .NET (ASP.NET, Visual C#, etc.), Java, ASP, CORBA, Visual Basic, and several other programming languages.

Security Solutions

Knowledge and experience in building advanced security solutions to protect the customer's information assets. This includes:

- Security management and operations
- Secure wireless VPN and perimeter
- Identity and access management.

These are some of the information technology solutions that Jigits can offer your organization. It is Jigits' mission to provide information technology solutions today to make the best tomorrow. We believe that better last only a few days; best last forever. Let us provide you with information technology solutions today.
